## Research shows MaxFlex™ XR outlasts other joint supplements\*

### All joint supplements are NOT created equal

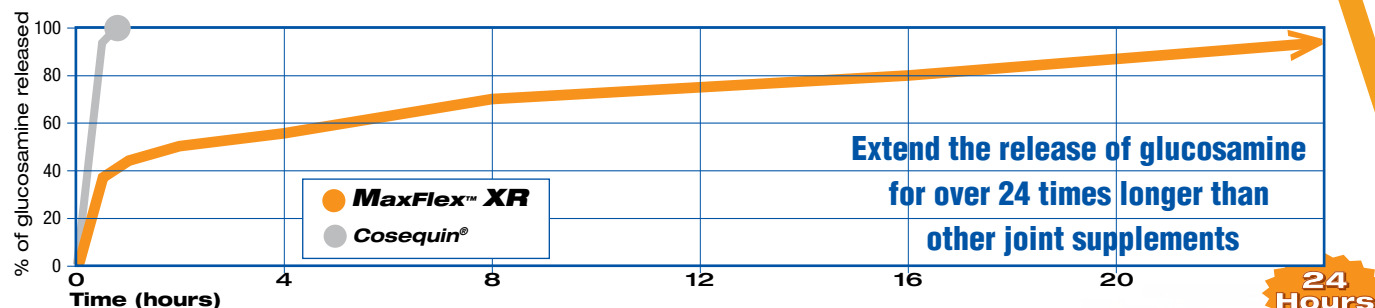

MaxFlex XR combines important ingredients for joint health, PLUS extended release glucosamine, to provide optimum joint health over an extended period of time.

Glucosamine plays an important role in cartilage maintenance. It is believed that supplemental glucosamine complements the body's natural production to provide joint health support.

One daily dose of MaxFlex XR keeps glucosamine in your horse's system a full 24 hours, providing a continuous supply of important joint health ingredients all day long.

Activated by moisture in the digestive tract, the extended release system slowly releases layers of glucosamine providing a constant supply of glucosamine to the joints. Other glucosamine formulas are released quickly and are only available to the horse for a shorter period of time.

Research has shown that extended release formulas can extend the action of the active ingredient in the body.

Extend the release of glucosamine for over 24 times longer than other joint supplements

24 Hours

### Potent combination of active ingredients

In addition to extended release glucosamine, MaxFlex XR also contains chondroitin sulfate, hyaluronic acid and MSM.

- Chondroitin sulfate is important for healthy cartilage
- Hyaluronic acid helps support healthy joints
- MSM completes the formula as a natural source of sulfur—an antioxidant and key component of cartilage.

In MaxFlex XR these joint health ingredients, combined with new Extended Release technology, provide 24-hour joint care for your horse.

### MaxFlex™ XR contains:

#### Active Ingredients per 1/2 ounce:

XR Glucosamine (Marine)	5,000 mg
Methylsulfonylmethane (MSM)	100 mg
